Fertinagro Biotech goes to FIMA with its Integral Fertilization Plans

Fertinagro Biotech**, the plant nutrition company of the** Grupo Térvalis**, will present its Integral Fertilization Plans at the 40th edition of the** International Fair of Agricultural Machinery **that will be held between 20th and 24th February at the** Zaragoza Fair**. Your exhibitor will be located in pavilion 10, stand F-G / 29-30, of the fairground.**

During this appointment, considered internationally as one of the most important of the year for the agricultural machinery sector, Fertinagro Biotech, which has the largest catalog of products on the market with 800 references that cover all the needs in plant nutrition, will present, among other novelties, the most technological range of fertilizers: RENOVATION FORCE.

Fertinagro Biotech has the Agrovip service, the best technical service composed of more than 250 professionals with technical knowledge in the agricultural sector who offer the best solutions to the needs of the farmer through personalized attention from start to finish through their PFIS. Its objective: "Let the farmer get the accounts".

> The PFIs are Integral Fertilization Programs developed specifically for each type of crop, in order to provide the most complete nutrition

These consist of programming all the actions focused on nutrition and biostimulation of the crop

with the assurance of using at each moment the most appropriate resource, depending on the situation of each vegetative cycle. The objective of the technicians of Agrovip is the same as that of the farmer: to achieve maximum yields, and this is achieved through the fertilizers provided.

The more than 2,000 farmers who have already tried these PFIs have managed to exceed 30% of their income in extensive crops and more than € 3,000 per hectare in intensive, depending in any case on the type of crop and the area in which it is located.

Triple effect range

As for the product line, the technicians will also show during the fair the RENOVATION FORCE range, formed by complex, complete and technological components, specially designed to be used as background fertilizer in all types of crops. In addition, it is formulated with the F2® Technology that gives a triple effect to the fertilizer: It nourishes the crop, stimulates and provides energy for the different metabolic processes and corrects the soil. This technology, therefore, allows the use of fertilizer to be maximum, minimizing losses of nutrients in the soil solution, providing a stimulating and energetic effect.

This and other technologies used also have benefits on the crop, covering all their nutritional needs, avoiding shortages and thus obtaining maximum production and reduces stress situations of the plants.

> Fertinagro Biotech is a leader in the sale of technological fertilizers, minerals, organic, amendments and correctors, as well as certified organic in Europe

In addition, it has become the benchmark of its sector in Spain thanks to its commitment to quality, safety and the environment.

As a novelty, for those who come to know the stand of Fertinagro Biotech, each day will be raffled a lot of a Ham of Teruel D.O. of Airesano and a pack of Lagar d'Amprius wine bottles, both brands also belonging to the Térvalis Group. The draw will be made among all those who have visited the stand during the day and have filled in a short form. On the last day of the fair, among all those who have participated in the draws, there will be a final one-year draw for free agricultural advice with Agrovip Service technicians.
