# Large participation of BKT at Bauma 2016

**BKT home bullen preparations for the 31th edition of BAUMA, international fair of machinery and vehicles for the sectors of construction, manufacturing and mining, which in April will be held in Munich. In order to testify their competence in these highly demanding sectors, BKT features ten high performance tires, including five new products and Giant tire.**

There is great agitation in BKT house overlooking one of the most important events worldwide in the field of machinery for the earthwork, the Works, construction and mining. We are talking about Bauma, the triennial trade show to be held this year in Munich from 11 to 17 April. And at the entrances to the fair, as well as crossing points between halls, BKT will welcome visitors with a strong and massive advertising presence, which transmits the vision of BKT. In the same way as for the 2013, BKT sponsors and will be present in all riskshaws made available to visitors to travel in the vast exhibition area outside. And just in the outside area, it is impossible to ignore the enormous EarthmaxSR 45 Plus, the new tire BKT Giant, with its extraordinary height of 2.70 meters.

In the BKT stand in the inner zone (Hall A6, Stand 225), the main character is the Earthmax series, exposed to six different models: EarthmaxSR 41 (measured 29.5 R 25), a radial tire for dumpers All Steel; EarthmaxSR 47 (measured 24.00 R 35), a highly cut-resistant tire, particularly developed for rigid dump trucks that operate in severe conditions; Earthmax SR 53 (measured 23.5 R 25), a robust and durable tire, ideal for wheeled shovels and excavators in applications for quarries and mines Works. the group valid EarthmaxSR 22 (measured 20.5 R 25), a tire with a high resistance to the wheeled shovels and bulldozers used in winter conditions with snow and ice is added.

Just leave the production line Earthmax another member of the family: EarthmaxSR 31 (measured 23.5 R 25), a robust and balanced tire All Steel belts multilayer steel blades designed to Tyre, excavators and dumpers. The tire ensures extraordinary strength and stability as well as excellent cut resistance and high temperature.

Among the new innovations of the big family of BKT, most probably it corresponds to EarthmaxSR 45 Plus (measured 27.00 R 49). Its gigantic dimensions over 2.70 meters in diameter are truly amazing.

Giant tire is designed for dump trucks and is ideal for use on long journeys. All Steel resistant housing guarantees extraordinary stability and extreme resistance to cuts and lacerations. The special design of the tread also provides excellent self-cleaning properties and minimizes vibration and noise. To BKT, tire Giant exposed in the outer area represents a major step forward on its way to join a market of giants.

For high speed cranes, both on and off the road, the tire exhibits BKT AIROMAXAM 27 (measure 445/95 R 25) which ensures optimum performance of speed and comfort on the road. In addition, resistant to very high temperatures.

To BKT, Bauma is the perfect occasion to also present the latest products in the field of logistics. Some tires of PORTMAX and LIFTMAX lines are in the center of attention: PORTMAX PM 90 (measured 18.00 R 25) is a radial tire with multilayer steel belts for Reach-Stacker crane. Thanks to the All Steel structure, the weight of the loads is well distributed on the surface and the housing is very robust. Low rolling resistance translates into reduced fuel consumption. For tire gantry cranes used in ports, BKT has developed the radial tire PORTMAX PM 93 (measured 16.00 R 25) All Steel structure and multilayer steel belts ensure high load capacities.

All other tire structure is the new LIFTMAX Steel LM 81 (as 7.50 R 25), designed for forklifts. This tire provides a wide range of advantages: extremely resistant housing, low rolling resistance and excellent stability even at high speeds, and especially, reducing operating costs.

When the work is hard on the operations carried out in mines, quarries or ports, BKT provides the most valid solutions and support for professionals and all the machinery - in the true sense of the word.
