Molecor participates in a Technical Meeting of the Plastic Industry, in Lima

Molecor, a leading Spanish company in the water industry, participates in these days in the Technical Workshop of the Plastic Industry, which takes place from October 2th to 6th in Lima, Peru. It is an event organized by the Spanish Association of Plastics Industries (ANAIP), with the support of ICEX España Exportación e Inversiones, within the framework of the Sectorial Plan 2017, with the aim of promoting the Spain brand.

> The themes that will be addressed in this Conference will revolve around Plasticulture (plastics in agriculture) and the Circular Economy, two themes where Spain is very well positioned, especially in markets in Central and South America

The great acceptance of efficient solutions for hydraulic infrastructures in these markets has led this Spanish company, a world leader in technology and manufacture of Oriented PVC Pipes (PVC-O) for pressure water pipes, to consolidate its presence with the to show the best technical and economic alternative for the design of the networks, and to make known the role of PVC-O pipelines within the framework of circular economy.

Given its continuous commitment to innovation and development, Molecor brings novel solutions that meet the changing needs of the international market, introducing, positioning and consolidating the Spanish export offer in foreign markets.

> TOM® Oriented PVC Pipes (PVC-O) are the excellent alternative to use in hydraulic networks, thanks to its efficiency in operation and its low maintenance costs

Other advantages are its high physical-mechanical and chemical properties, *which ensure reliability in supply and environmental protection, offering a better environmental performance*, presenting a significantly lower environmental footprint than other alternative products, improving the contribution to the correct sustainable development of the planet, and optimizing the consumption of natural resources.
