Syngenta innovates in Baby Leaf for IV Range

Throughout the days of Field that Syngenta has been celebrating during February and March, producers, technicians of cooperatives and heads of purchase of the great national and European distribution have had the opportunity to know the wide offer of this company in the segment of leafy vegetables (lettuce, endive, spinach and brassicas), highlighting its innovations in Baby Leaf for VI Range, in both red and green.

On the occasion of its traditional Field Days, Syngenta has organized visits in small groups to its Research and Development Center in Torre Pacheco, to show the full potential of its novelties for this campaign. In all the visits made highlighting the great variety of materials offered by Syngenta in the Baby Leaf range for the fourth range, both in red and green.

> Varieties such as Mellita, Sensita, Lucita, Stellita, Kingita for the Green Baby Leaf segment, and Kerrita, Izabita and Adelita for the red segment, provide an excellent range of possibilities, typologies, resistance and dates of cultivation in this segment

In other segments of the market, such as Curly Escarole, the Smittie variety stands out for its good tolerance to tip burn (both lateral and internal), its great volume and weight, as well as its excellent tolerance to eavesdropping. In the segment of Lettuce Romana for export, the Pivotal variety stands out *that allows a great versatility to the producers when planning the harvesting in the field*. For the segment of Mini Romana Lettuce was presented as a novelty Starena, *which stands out for the excellent size in cold conditions along with its perfect formation*. In addition, Mandelina was presented as the variety that complements the range of mini Roman for spring collections, with an excellent behavior against "tip burn".

> In the spinach segment, El Prado is the new commitment on the part of the technical team of Syngenta for the winter cycle. It is a vigorous, erect, very uniform and fast growing variety

Finally, Syngenta showed its range of Brassicas, where they could see the range of Cauliflower, highlighting the range of mini cauliflowers of colors Purple, Orange and Green. On the other hand, within the Broccoli, the variety Monflor has been presented, *a broccoli multiflorete that allows an easy cut of the florets for the frozen industry, as well as for the industry of fresh product for sale in mini floretes, and its consumption so much In fresh as cooked.*

About Syngenta

Syngenta is a leader in the agricultural sector that helps improve global food security, enabling millions of farmers to make better use of available resources. Through first-rate research and innovative farming solutions, its 28,000 employees in more than 90 countries work to transform the way they grow plants, in line with this company's commitment to the recovery of degraded soils, improvement of biodiversity and the revitalization of rural communities.
