

Tetra Pak launches a total plant management service that increases the profitability of customers

Tetra Pak has launched Tetra Pak® Plant Secure, a plant management service that marks a radical change and improves the profitability of customers.

The new service begins with a detailed audit of all the equipment and systems of the customer's value chain. This analysis, combined with Tetra Pak's in-depth knowledge of the industry and the baseline data on food processing, allows its specialists to identify opportunities and implement improvements throughout the client's operation. All Tetra Pak Plant Secure contracts include targets for reducing operating expenses and optimizing capital expenditures.

Dennis Jönsson, CEO and CEO of Tetra Pak Group, said: "Our investment in 4.0 industrial technologies, such as artificial intelligence, automation and data speed, has allowed us to offer better support to our customers in the digital age. . Tetra Pak Plant Secure is a great example of how we use the new technology to broaden our perspective and offer net benefits to our customers. "

Pilot projects have been carried out in the Americas and in Europe, with results that exceed the expectations of the clients. For example, a dairy producer based in the Americas reduced its operating costs by more than 10% during the first year of implementation, and the project continues to generate more savings.

Tetra Pak Plant Secure is being extended to all food and beverage companies around the world.
