Daymsa collaborates in the IFAPA Las Cítricos Technical Citrus Workshops, which reaped a resounding success

Daymsa, a company specializing in biocontrol and biostimulants for agriculture, participated, on March 8th, at the Citrus Technical Conference, held at the IFAPA center "Las Torres-Tomejil", in the Seville town of Alcalá del Río.

This event, which has had a great success in the call (over 150 attendees), has brought together the main technicians and producers of the Andalusian citrus industry. It has addressed issues related to the use of biostimulants and striped in citrus: results in the improvement of the setting of `Navel Powell 'and the use of adjuvants as a strategy to control the red louse of California.

In these days the conference of Carlos Mesejo (IVIA) on the physiology of fruit set in citrus fruits: endogenous, hormonal and nutritional factors. Subsequently, the results of the tests carried out with the biostimulants of Daymsa Cytoplant-400 and Kelpak, for the improvement of the fruit set in

the Navel Powell variety, as well as Retenol, the adjuvant of Daymsa for the improvement of the insecticide control of red louse of California, were shown. .
