EuroChem Agro celebrates the First Day of Intensive Crops, focused on the techniques of citrus fertilization

Eurochem Agro Iberia **held in Benicarló the First Intensive Crops Day, under the title "Technical Conference on Citrus Fertilization, which has had the assistance of technicians and agricultural professionals from Andalusia, Murcia and Valencia. The main objective of this initiative has been to share knowledge and carry out demonstrations of management and application of fertilizers with** ENTEC® **technology.**

With a program distributed in a technical session in the morning, with presentations by the technical and commercial team of EuroChem Agro and invited technicians / farmers, and a practical session in the afternoon, with visits to farms in the Benicarló area, it was possible to those present to harvest the ideas and accumulated experience of the producers who already use these production systems in their farms. Attendees have had the opportunity to check in the field the effectiveness of EuroChem Agro solutions for citrus fertilization, with the possibility of assisting on-

site application of fertilizers from the ENTEC® Nitrofoska® range in the dropper line.
