EuroChem Agro Iberia expands its range of fertilizers for fertigation

EuroChem Agro Iberia **has launched a new range of products for fertigation,** Nitrofoska® solub. **This new range of fertilizers for drip irrigation, with which the firm expands its portfolio, aims to provide a comprehensive solution in fertigation, without mixing different fertilizers.**

Solub Nitrofoska® is a complete range of fully soluble fertilizer crystalline water. Its six formulas include macro and micronutrients (chelated by EDTA and EDDHA), magnesium, boron and easily assimilable sulfur and are completely free of urea and chlorides, which contributes to efficient absorption and utilization of nutrients.

> With formulas adapted to each phase of crop development (formulas rooting beginning of development, stimulating growth, fattening and maturation, etc.), Nitrofoska® solub allows full and balanced development of fruit, vegetables, citrus and other crops intensive

Nitrofoska® solub: Key Benefits

• Quick and complete dissolution in water.
• exclusively in nitrate form nitrogen and ammonia.
• balanced and complete supply of nutrients, with formulas adapted to each phase of crop development (formulas rooting beginning of development, stimulating growth, fattening and maturation, etc.).
• quality raw materials: do not contain chlorine or urea (inefficient form of nitrogen in fertigation), harmful elements for crops.
• With microelements chelated (EDTA), magnesium, boron and easily assimilable sulfur.
• The Nitrofoska® formula solub 12 + 5 + 30 carries iron (Fe) chelated with EDDHA, allowing a saving of iron chelate
• Character acid prevents clogging in the irrigation system and promotes assimilation of nutrients.
