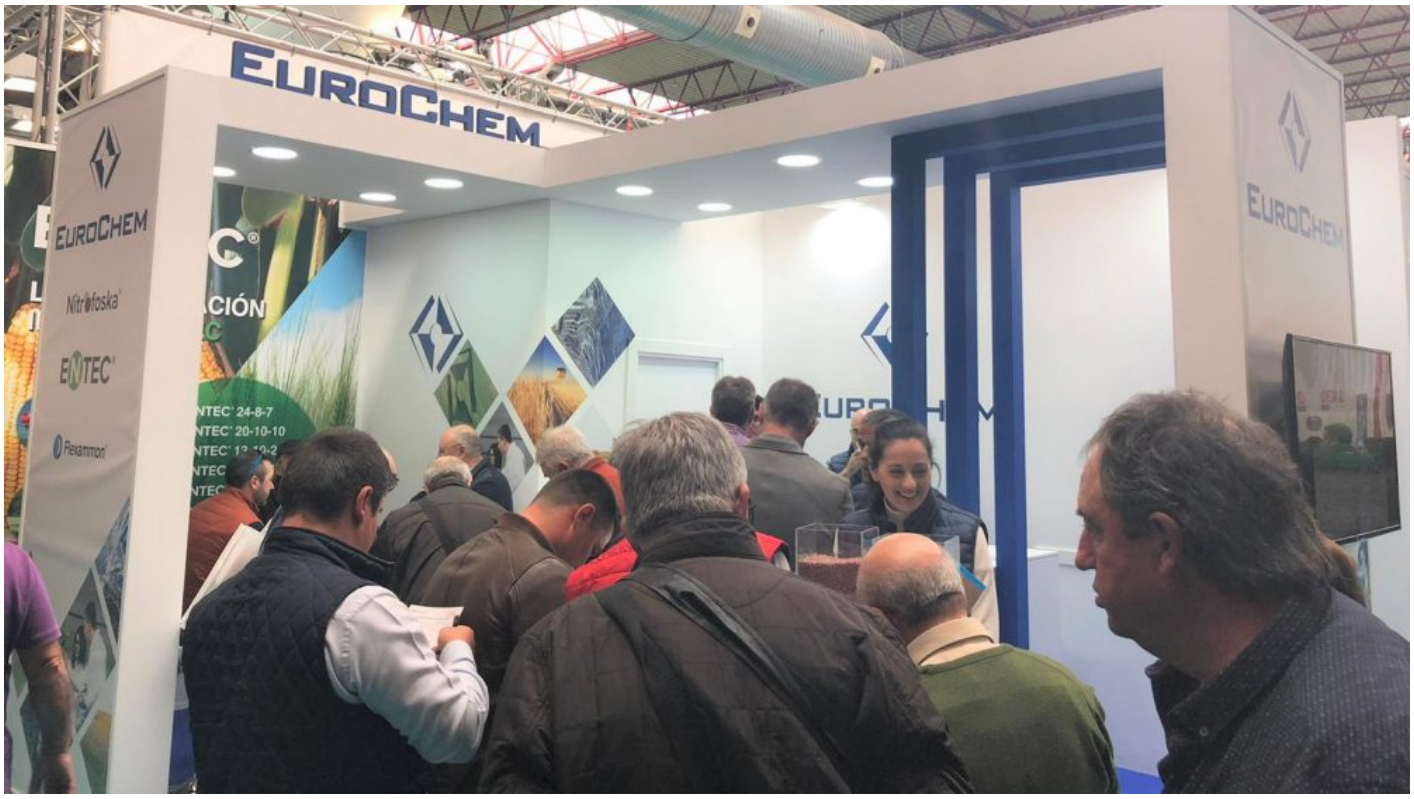
EuroChem shows at FIMA 2020 its wide range of fertilizers



EuroChem Agro Iberia recently participated in FIMA 2020. During its presence, it took the opportunity to show all its fertilization solutions for the most important crops. In addition, this showcase allowed the firm to thank the visit of its clients, friends and colleagues to its space at the fair, which it honored with its presence.

EuroChem is one of the most important agrochemical companies worldwide. The group is vertically integrated with activities ranging from mining and natural gas extraction to fertilizer production, logistics and distribution.

Its fertilizers for agriculture, horticulture, fruit growing and viticulture offer the complete range of the main nutrients. And now that they have completed their extensive portfolio by adding conventional fertilizers like urea, ammonium nitrate and urea solution (UAN), monoammonium phosphate (MAP) and diammonium phosphate (DAP), your customers can benefit from a full range of fertilizers from a single supplier. From classic conventional fertilizers (15-15-15, 12-20-12, etc.) to Nitrofoska® complex potassium sulfate (SOP) fertilizers, the innovative high-quality products with stabilized nitrogen from our ENTEC® range and a complete offer of soluble, liquid and foliar fertilizers for more efficient fertigation. This firm manufactures all its fertilizers complying with very strict quality standards.

The last edition of the International Fair of Agricultural Machinery (FIMA) closed its doors beating records in its figures: 237,466 visitors (most of them professionals), 1,652 brands exhibited in its 163,500 square meters, 41 awarded technical innovations, more than 3,000 meetings and international meetings between the exhibiting firms, more than 2,000 attendees to the days and parallel activities and about 80 nationalities that gathered at FIMA 2020. All these numbers confirm once again FIMA as the fair dedicated to the largest agricultural sector in Spain. and a fair reference in Southern Europe.
