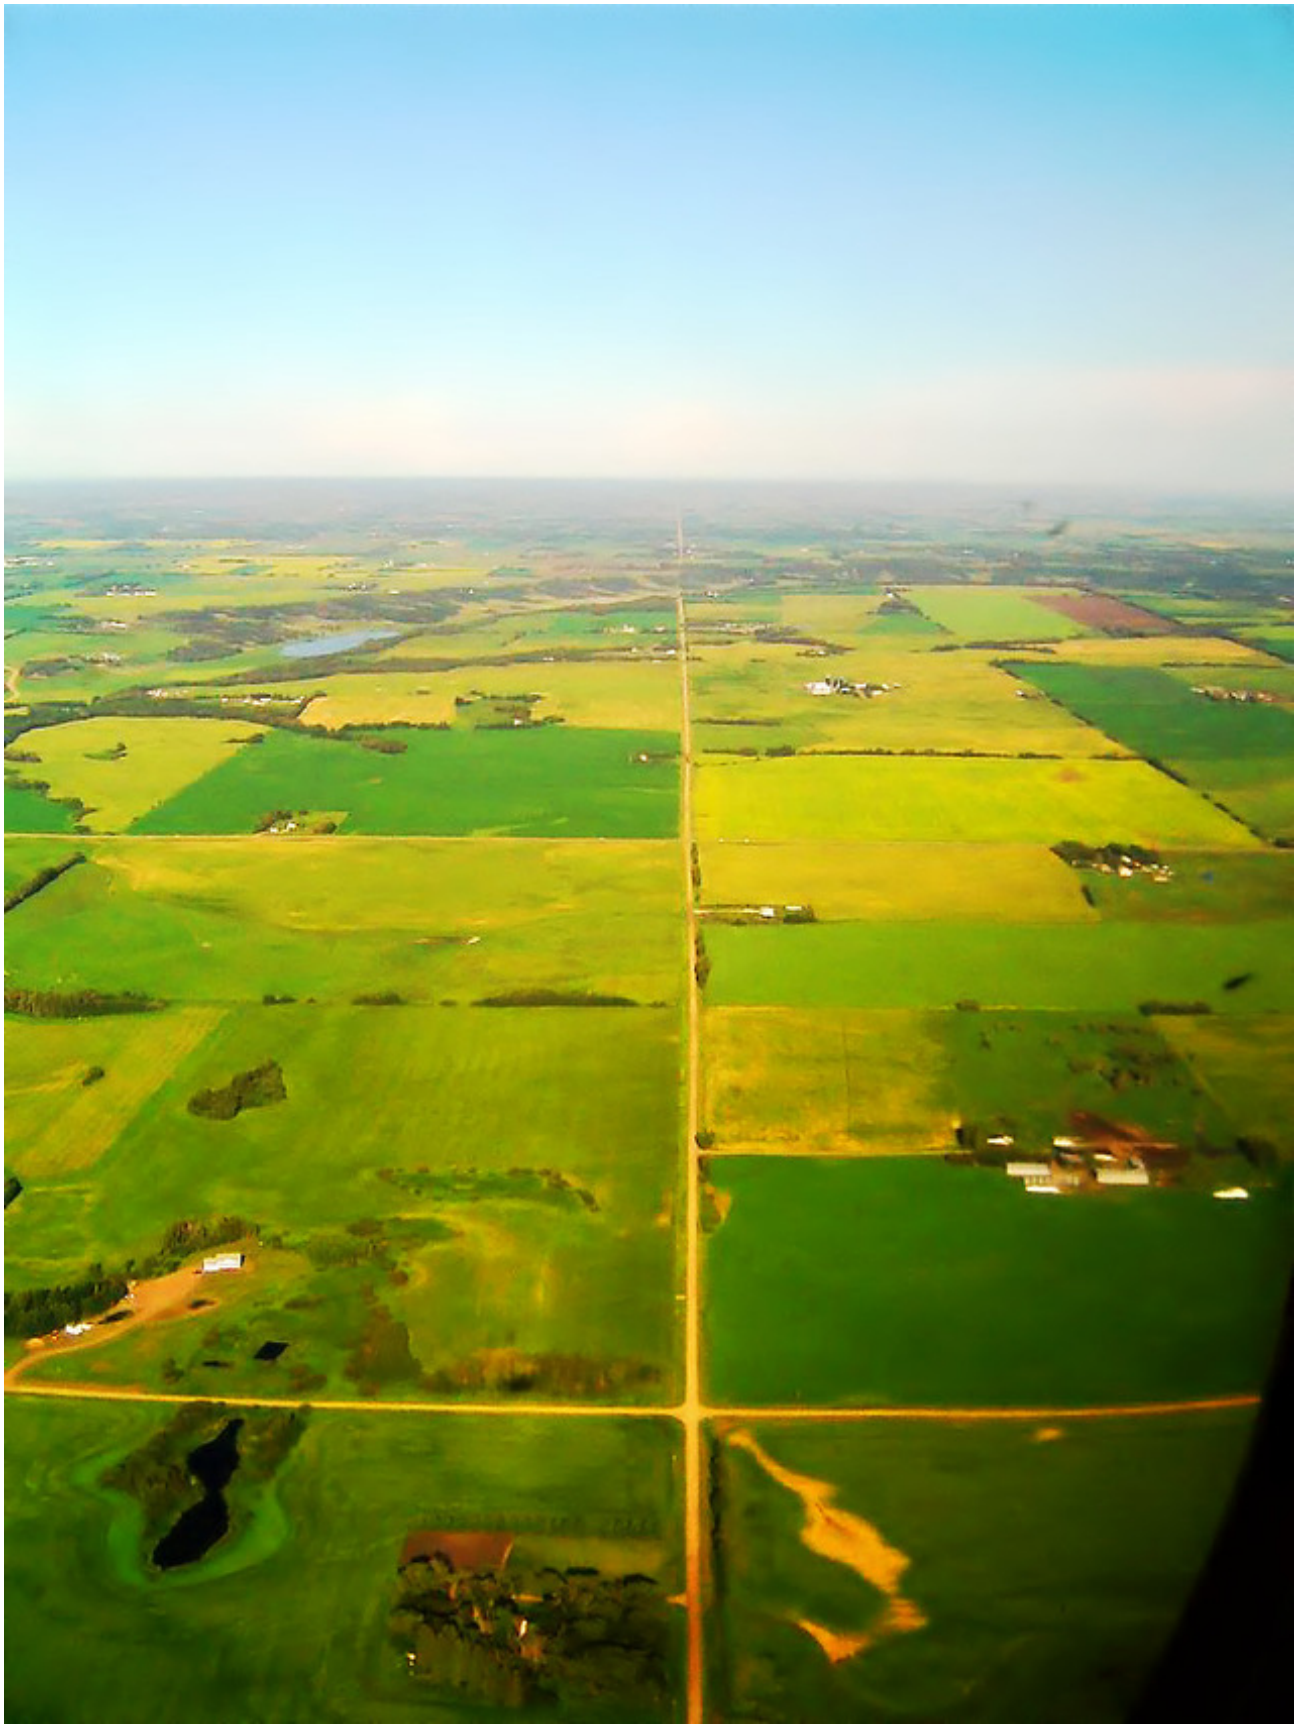
Soil regeneration and microbiology, the themes of the Fertinagro Biotech talk at Expo Levante



Fertinagro Biotech, the plant nutrition company of the Grupo Térvalis, will be present at the XIV edition of the Levante Expo Agriculture Fair that will take place from April 18 to 20 at the Exhibition and Congress Center of Campohermoso (Níjar, Almería). Held every two years, it receives a large audience from the agricultural sector and gathers professionals from the auxiliary industry.

On this occasion, *Fertinagro Biotech that will attend visitors in Hall 2, stand 49-50, will have its team of Agrovip service technicians who will explain how their Integral Fertilization Programs (PFI's) help to get the most out of each crop in an efficient and personalized way.*

Also, within the broad program of conferences with leading speakers of the fair, Fertinagro Biotech will also participate. *Cristóbal Muñoz, Technological Product Manager of the Southern area of ??Fertinagro Biotech, will offer a technical talk on "Soil regeneration and soil microbiology" on Friday 20, at 13:30, in the auditorium of the fairgrounds.*

> The most frequent mistakes made when working the soil, the care of fertility and its regeneration, as well as the external contribution of substances will be several of the points to be addressed by Muñoz during his intervention.

Cristóbal Muñoz will talk about the sustainable management of crops to reduce stress in plants, increase their yield, quality and health. For this, it will affect the importance of the contribution of humic substances and amino acids to the soil. The former help the soil to retain water and nutrients, dissolve salts avoiding salinization, etc. For its part, amino acids help to form proteins consumed in situations of stress to reduce it.

In this sense, the representative of Fertinagro will talk about the *Integral Fertilization Programs (PFIS)* of the Agrovip technical service, composed of more than 250 professional delegates with technical knowledge in the agricultural sector that offer the best solutions to the needs of the Farmer through personalized attention from start to finish through these PFIS for an end: "That the farmer will get the accounts," since they make a sustainable production and address the biodiversity of the soil.

> Thanks to talks such as that of Fertinagro Biotech, the new advances that in one way or another affect the economic engine of the Almeria region are made known.

Fertinagro Biotech is a leader in the sale of technological fertilizers, minerals, organic, amendments and correctors, as well as certified organic in Europe. In addition, it has become the benchmark of its sector in Spain thanks to its commitment to quality, safety and the environment. It also has the largest catalog of products on the market with 800 references that cover all the needs in plant nutrition.
