Trelleborg tackles recycling industry with Brawler high performance solid tires

Trelleborg tires, a leading brand of OTR equipment tires, will bring its expertise and top-of-the-line specialty tires designed to meet the challenge of material handling in the recycling industry at ISRI 2024, Booth #2263.

The annual convention and exhibition taking place April 15-17, 2024 in Las Vegas, Nevada, is the largest recycling industry event worldwide, bringing together professionals and products that will power the industry into the future.

"Trelleborg is focused on delivering greater sustainability in all areas of our business and throughout the life cycle of its products, and producing tires made for endurance – reducing tire waste - is just one component of our sustainability commitment," states Brian Bentley, National Account Program Manager Construction at Yokohama TWS North America. "Our tires are engineered for the most extreme applications in the industry, and in material handling for waste management, especially at tough scrap metal sites, our complete range of solid tires are made to resist cuts, delivering superior performance with greater operator safety and a smoother ride, and less downtime, which means greater cost savings for businesses."

Brawler tires have been providing extra strength to waste management for years, evolving along

with the industry to handle ever-increasing capacity, more modern equipment and more challenges. The Trelleborg Brawler High Performance Solid (HPS) line has been engineered for intense recycling operations, with its latest addition, the Brawler HPS Soft Ride, proven to give 40% greater deflection when compared to standard solid tires. Its unique elliptical sidewall construction is made for greater shock absorption, ensuring 30% less vibration to maximize operator comfort, no matter the application.

Ideally suited for the scrap yard, the Trelleborg line offers specific solutions for enhanced productivity on every type of material handling equipment, including: wheel loaders, skid steers, articulated dumps, rigid dumps, forklifts and telehandlers. And at ISRI 2024, scrap metal specialists will also discover the benefits of Trelleborg super single and excavator dual assembly tires, specifically made to handle the toughest jobs in the scrap metal industry, at the Trelleborg tires Booth #2263.
